Natural olive and coconut extracts. In the manufacture of our products, we use fatty acids from olives and coconuts. These are selected over the course of many years and, with the benefit of our considerable experience and expertise, allow us to produce an exclusive range of highly effective and highly biodegradable soaps.

Packages coming out from recycled and recyclable material. We pack all our products using cardboard boxes made from recycled material. In this way, we avoid the unnecessary usage of raw material, water and energy while reducing the negative effects of packaging waste on the environment and our health.

SORO GLOBAL, aware of our co-responsibility for global warming because of our environmental policy, are taking action to minimize the impact associated with our business generates in climate: Compensation CO2 emissions (0 CO2).

BUYING OUR SORO GLOBAL PRODUCTS, WE ARE HELPING TO PRESERVE AN AREA OF THE PERUVIAN AMAZON, ONE OF THE KEY POINTS OF BIODIVERSITY ON THE PLANET.

Compensation CO2 emission is based on the contribution volunteer for an economic amount of money proportional to the tones of CO2 emissions, which have not yet been able to reduce, for a period of time.

The compensation project avoided in Madre de Dios in Peru.

The deforestation project avoided in Madre de Dios covers 100.000 hectares of forest. The area is located in the region that belongs to the Villacampa-Amoró, an ecological corridor in the Peruvian Amazon, one of the areas in the world where there is a greater number of threatened species "HOTSPOT" of biodiversity.
